Aplicaciones WEB

INTRODUCCIÓN

DEFINICIÓN DE SOFTWARE:

"Conjunto de requerimentos operacionales, especificaciones, código, guías, manuales y documentación de mantenimiento de un sistema basado en computadora." [Pressman 92]

"El Software es un programa, documento, procedimiento, y de rutinas asociadas con la operación de un sistema de cómputo". [http://coqui.lce.org/rquiles/Software.htm]

SUITE

Conjunto de programas con un objeto en común, que pueden
operan entre si, compartiendo e intercambiando datos para resolver
un problema específico

OpenOffice.org

Star Office 5.2
•Sun Microsystems
•Uno de los mayores proyectos de software libre.

OpenOffice cuenta con:

- Procesador de textos (Writer).
- Planilla de cálculos (Calc).
- Software de presentaciones (Impress).
- Software para dibujo (draw).

•Posibilidad de abrir y guardar documentos en formato Microsoft Office
(97/2000/XP) y tiene soporte para 27 idiomas.
- Requiere mayor potencia de hardware

---

SUITE

GCG Wisconsin Package
Genetics Computer Group

Seqlab, Línea de Comando, SeqWeb

PROGRAMAS:
Comparación
Búsqueda y recuperación desde Base de datos
estructura secundaria de DNA/RNA
Evolución
Ensamblaje de fragmentos
Búsqueda de Genes y reconocimiento de patrones
Mapeo
Selección de Primer
Análisis de Proteínas
Traducción

ftp.mrc-lmb.cam.ac.uk/pub/staden/staden_package

Medical Research Council
Ensamblaje
Preparar datos de secuenciador para análisis o ensamblaje
Detección de Mutaciones
Análisis de **Secuencias**

Manipulación de archivos de lectura y **Secuencias de** secuenciador
Any trace file
Archivos ABI, ALF, SCF

SUITE

The **E**uropean **M**olecular **B**iology **O**pen **S**oftware **S**uite

http://bioinf.ibun.unal.edu.co/Pise/5.a/index.php

- 1988, EGCG
- Software libre con Código de Fuente Abierta
- Sus aplicaciones y Librerias están bajo Licencia Pública General (GPL)
  - Edición y visualización de secuencias
  - Alineamiento de secuencias
  - Análisis de Ácidos Nucleicos y proteínas
  - Análisis Filogenéticos
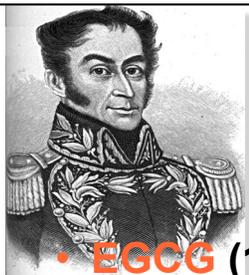

... algo de historia.

- **EGCG** (1988) surgió como colaboración entre la **EMBnet** y otros institutos, utilizaba las librerías de GCG.
- Pensado para el Sanger Center.
- Problemas de licenciamiento: imposible distribuir más licencias académicas.
- Se inicia el desarrollo de EMBOSS.

emboss cpgreport

Function

DETALLES !!!

Reports all CpG rich regions

Description

cpgreport scans a nucleotide sequence for regions with higher than expected frequencies of the dinucleotide CG.

CpG refers to a C nucleotide immediately followed by a G. The 'p' in 'CpG' refers to the phosphate group linking the two bases.

Detection of regions of genomic sequences that are rich in the CpG pattern is important because such regions are resistant to methylation and tend to be associated with genes which are frequently switched on. Regions rich in the CpG pattern are known as CpG islands.

This program does not find CpG islands as normally defined: "a region of greater than 200 bp with a %GC of greater than 50% and observed/expected CpG > 0.6". **cpgreport** instead uses a running sum rather than a window to create the score as follows: if not CpG at position i, then decrement running-Sum counter, but if CpG then running-Sum counter is incremented by the CPGSCORE. Spans greater than the threshold are searched for recursively.

Usage

Here is a sample session with cpgreport.

```
% cpgreport embl:rnu68037
Reports CpG rich regions
CpG score [17]:
Output file [rnu68037.cpgreport]:
```

Command line arguments

```
  Mandatory qualifiers:
 [-sequence]       seqall     Sequence database USA
  -score           integer    This sets the score for each CG sequence
                              found. A value of 17 is more sensitive, but
                              28 has also been used with some success.
 [-outfile]        outfile    Output file name

  Optional qualifiers: (none)
  Advanced qualifiers:
  -featout         featout    File for output features

  General qualifiers:
  -help            boolean    Report command line options. More
                              information on associated and general
                              qualifiers can be found with -help -verbose
```

Mandatory qualifiers		Allowed values	Default
[-sequence] (Parameter 1)	Sequence database USA	Readable sequence (s)	**Required**
-score	This sets the score for each CG sequence found. A value of 17 is more sensitive, but 28 has also been used with some success.	Integer from 1 to 200	17
[-outfile] (Parameter 2)	Output file name	Output file	*<sequence>*.cpgreport
Optional qualifiers		**Allowed values**	**Default**
(none)			
Advanced qualifiers		**Allowed values**	**Default**
-featout	File for output features	Writeable feature table	*unknown.gff*

Author(s)

This program was originally written by Gos Micklem (E-mail: gos@sanger.ac.uk Post: Informatics Division, The Sanger Centre, Wellcome Trust Genome Campus, Hinxton, Cambridge, CB10 1SA, UK).

It was modified for inclusion in EGCG under the name 'CPGSPANS' by Rodrigo Lopez S. (E-mail: rls@ebi.ac.uk Post: EMBL Outstation Hinxton, The European Bioinformatics Institute, Wellcome Trust Genome Campus, Hinxton, Cambridge, CB10 1SD, UK).

This application was modified for inclusion in EMBOSS by Alan Bleasby (ableasby@hgmp.mrc.ac.uk)

History

Completed 22nd March 1999.

Target users

This program is intended to be used by everyone and everything, from naive users to embedded scripts.

Inicio

REMAP Muestra una secuencia con los sitios de restricción, traducción etc

Traducción de secuencias

TRANSEQ

A uno o a todos los tres marcos en sentido delantero o reverso, o todos los seis marcos

emboss *Análisis de Proteínas*

Existen varios programas, entre ellos:

Program name	Description
backtranseq	Back translate a protein sequence
coderet	Extract CDS, mRNA and translations from feature tables
getorf	Finds and extracts open reading frames (ORFs)
marscan	Finds MAR/SAR sites in nucleic sequences
prettyseq	Output sequence with translated ranges
remap	Display a sequence with restriction cut sites, tran
showorf	Pretty output of DNA translations
showseq	Display a sequence with features, translation etc
transeq	Translate nucleic acid sequences
wobble	Wobble base plot

Program name	Description
garnier	Predicts protein secondary structure
helixturnhelix	Report nucleic acid binding motifs
hmoment	Hydrophobic moment calculation
pepcoil	Predicts coiled coil regions
pepnet	Displays proteins as a helical net
pepwheel	Shows protein sequences as helices
